SchoolPass Dismissal Management

Modern AI-Based Solutions for an Automated Dismissal

Carline Automation

With our advanced carline automation technology, parents are automatically identified and students are scheduled for dismissal based on license plates, vehicle RFID tags, GPS location or mobile entry onsite. Eliminate noisy PA systems, walkie-talkies, and crowded pickup areas to streamline your carline & dismissal process. Reduce carline time by up to 50%.

Integrated Parent Change Management

Empower your parents via a simple-to-use mobile app to manage & communicate arrival/dismissal changes to staff and teachers. A change made by a parent in the app to a student's attendance status or dismissal plan is automatically reflected on bus boarding manifest, in carline management, and in after-school program rosters. Save 1,800 hours per school year in the front office.

Bus Ridership Management

Ensure your students are on the correct buses to keep them running on time. Notify your parents and administrators when buses leave school daily and on the field trips. Produce real-time bus manifests and maximize bus capacity.

After-school Activity Management

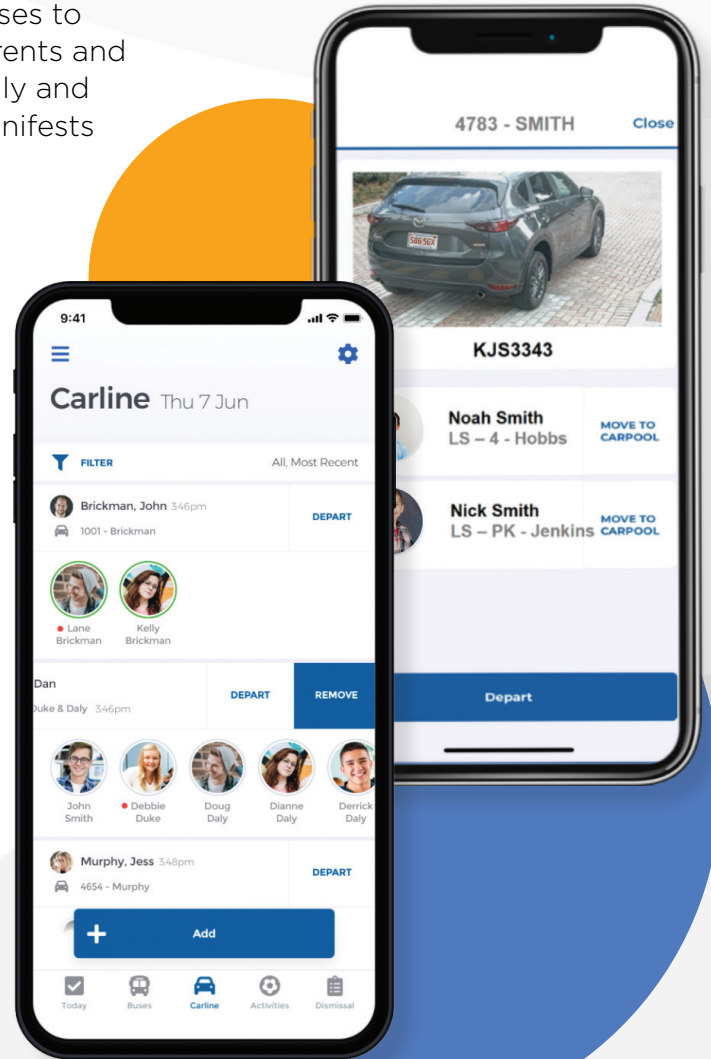

Manage after-school activities online including activity attendance, with or without signature capture. Provide your activity coordinators with real-time rosters, your parents with accurate attendance notifications and your business office with attendance reports for billing accuracy.

Late Arrival and Early Dismissal Management

Easily integrate late arrival and midday dismissal changes when parents drop off/pick up students. Enhance student safety with tracking and documentation to facilitate accountability every day.

Requires SchoolPass Visitor Management.

This can't wait.
